RESEARCH PROJECTS

- **Direct Volume Render Streaming** APR. 2022 ∼ JULY. 2022
  Implemented a DICOM 3D visualization app prototype for Oculus Quest2 using Nvidia **CloudXR** and Unity. Funded by INUCreative Inc. Demo video link (CloudXR), Demo video link (Unity)
- **Neural Video Enhancement at Scale** OCT. 2021 ∼ DEC. 2021
- **Optimizing downlink scheduling in Radio Access Networks** AUG. 2020 ∼ Present
  Designed a practical flow scheduler for LTE/5G xNodeBs that achieves low-latency for Interactive traffic. Implemented the system on top of **srsRAN** (i.e., open-source LTE/5G software radio suite) and **NS-3**. The scheduler can reduce webpage load time of Android phones up to **34%**. Funded by **Samsung Electronics Co., Ltd. Modem S/W R&D Group.**
- **Deploying Credit-based Proactive Transport for Datacenter Networks** JULY. 2020 ∼ JAN. 2021
- **Neural-enhanced Live Streaming (LiveNAS)** NOV. 2018 ∼ JULY. 2020
  Designed a new live ingest system that enhances the origin live stream's quality with online-trained super-resolution DNNs at the ingest server. The system delivers up to **69%** QoE improvement. Implemented client, server with **WebRTC**, **Pytorch** and **ffmpeg**. Led the project as a **team leader**.
- **Neural-enhanced Adaptive Streaming (NAS)** NOV. 2017 ∼ OCT. 2018
  Designed a new video delivery system that integrates super-resolution DNNs with adaptive streaming. Implemented **dash.js** that handles DNN integrated ABR and super-resolution on MPEG video chunks.
